

INDUSTRY WHITE PAPER · APRIL 2026

The 2026 US Field Services Opportunity

How \$1.06B in retail, restaurant, and banking capex will reshape field services labor demand

An evidence-based market intelligence briefing for management

Based on 200 verified industry leads across three authoritative lists

200 Verified Leads **\$1.06B** Est. 2026 Labor TAM

3 Industry Lists **2022–27** Multi-Year Data

Data sources:

- Coresight Research US Store Tracker (annual 2022–2026)
- NRF/Kantar 2025 Top 100 Retailers report
- QSR Magazine 2025 QSR 50 · Circana 2025 Restaurant Rankings
- S&P Global Market Intelligence Q4 2025 Bank Rankings
- FDIC · OCC · Banking Dive · American Banker
- Company press releases · SEC 8-K filings · earnings calls

Executive summary

The US physical retail, restaurant and banking footprint is entering the most concentrated period of structural change in over a decade. For a field services provider whose business depends on physical-site installation, decommission and project management labor, this creates what may be the largest single-year addressable opportunity of the post-pandemic era.

\$1.06B 2026 Est. labor TAM	200 Verified leads	+65% vs. 2022 labor base	3 Industries converging
---------------------------------------	------------------------------	------------------------------------	-----------------------------------

Four evidence-based conclusions

1. Retail closures are at record levels and the work they create is real. According to Coresight Research, 8,234 US retail stores closed in 2025 — the highest annual count the firm has ever tracked — with 2026 projected to remain elevated at approximately 7,900 closures. Each of those closures is a physical site requiring decommission: fixture recovery, signage removal, pharmacy dismantling, and site clean-out. Walgreens alone accounts for 500–700 closures in 2026, representing an estimated \$21.6M in field services labor for one account.

2. QSR is in the largest remodel supercycle since the 1990s. Burger King's disclosed \$700M+ Reclaim the Flame / Royal Reset programme covers 3,000 US sites through 2028. Subway is refreshing nearly 7,000 US locations. Popeyes will complete a 100% US technology rollout by end-2026. Combined, just these three brands represent more than \$230M in estimated field services labor, and unlike retail closures, this is recurring, programme-based work.

3. Banking M&A is creating a once-in-a-decade rebranding wave. Three major US bank deals closed or were announced in 60 days (Feb 2–Feb 3, 2026): Fifth Third + Comerica (\$12.3B), Huntington + Cadence (\$7.4B), and Santander + Webster (\$12.3B). Combined, these transactions will trigger signage replacement, ATM rebranding, and teller-line modifications at over 1,600 US branches, with system conversion deadlines in the second half of 2026.

4. The net effect on field services labor is unambiguously positive — every driver adds work. Even declines in retail and banking are value-additive: every closure = decommission work, every M&A =

rebranding work, every new build = full fit-out work. There is no activity category in this dataset that reduces the total labor opportunity.

Management recommendation

The data supports an aggressive 2026 go-to-market posture targeting the highest-value programme contracts first: PNC Financial (\$83M est.), JPMorgan Chase (\$43M), Burger King (\$126M), Subway (\$91M), JD Sports/Hibbett (\$24M), and Walgreens (\$21.6M). These six accounts alone represent 35% of the total 2026 TAM and have publicly disclosed, time-bound programme windows that favour early vendor engagement.

About this report

This white paper is a data-driven market intelligence briefing prepared for internal management review. It aggregates publicly verified information from 200 US companies across three authoritative industry lists — the NRF Top 100 Retailers, QSR Magazine's 2025 QSR 50, and S&P Global's 50 Largest US Banks (Q4 2025) — and estimates the 2026 field services labor opportunity each lead represents.

All company-level activity data (store counts, timelines, M&A details) is sourced from primary documents: press releases, SEC filings, earnings calls, and recognized industry research firms. Labor estimates use per-unit benchmarks derived from RS Means 2024, CBRE Retail Cost Index, CoreLogic/JLL, and Dodge Data & Analytics. See the Appendix for complete source citations.

Section 1 — Methodology & data sources

How field services labor is calculated

Every labor estimate in this white paper follows a transparent, repeatable formula:

$$\text{Units affected} \times \text{Per-unit labor benchmark} = \text{Estimated field services labor}$$

Each per-unit benchmark is composed of three elements: trades labor (~60–65%), project management (~20–25%), and site logistics (~12–18%). The scope is the work only — not the materials, fixtures, or equipment themselves, which are separate capital expenditures the retailer or bank procures independently.

Per-unit benchmark reference table

Location / activity type	Per-unit \$	Basis / driver
Dollar / value store (new build)	~\$20K	Small sq ft, simple fit-out, fast install
Convenience store (new build)	~\$33K	Fuel, food service, POS, drive-thru tech
Standard grocery (new build)	~\$80K	Cold-chain, refrigeration, aisle layout
Large-format grocery (new build)	~\$110K	Specialty deli, café, bakery, extra trades
Mass merch / Supercenter (new)	~\$215K	High SKU, auto, pharmacy, complex layout
Warehouse club (new build)	~\$330K	Very large sq ft, heavy racking, complex HVAC
Home improvement (new build)	~\$110K	Lumber, garden, pro desk, tool corral
Apparel specialty (new build)	~\$40K	Fixtures, dressing rooms, visual merch
Apparel premium / luxury (new)	~\$72K	Custom millwork, lighting, AV, security
Department store closure	~\$75K	Large sq ft, fixture pull, patch, clean-out
Drug store / pharmacy closure	~\$36K	Pharmacy dismantling, signage removal
Retail remodel (mid-size)	~\$50K	Layout change, paint, new fixtures, POS
QSR new build	~\$60K	Compact kitchen, drive-thru, POS, signage
QSR remodel	~\$42K	Brand refresh kit, kitchen upgrade
QSR closure	~\$20K	Small footprint decommission

Location / activity type	Per-unit \$	Basis / driver
Bank branch (new build)	~\$100K	Vault, teller line, security, IT infra
Bank branch remodel	~\$45K	Teller update, digital signage, ATM refresh
Bank branch closure	~\$28K	Vault removal, signage pull, IT decommission
Bank M&A rebrand (per branch)	~\$20K	Signage swap, POS migration, décor refresh

Sources: RS Means Construction Cost Data 2024 · CBRE Retail Cost Index · Dodge Data & Analytics · CoreLogic / JLL Retail Field Services Benchmarks.

Worked example

Dollar General 2026: 450 confirmed new stores × \$20K per unit = **\$9.0M** estimated field services labor. Breakdown per store: ~\$12–13K trades labor (electricians, carpenters, painters, IT), ~\$4–5K project management (scheduling, site walks, coordination), ~\$2–3K site logistics (travel, mobilisation, waste). This does *not* include the cost of shelving, refrigerators, signage materials, or POS hardware themselves — those are DG's capital procurement, not field services.

Section 2 — The 4-year structural shift

The US physical footprint has moved through four distinct phases since 2022. Understanding which phase each industry is in is essential to positioning field services conversations correctly.

2.1 Retail: record closures, reshuffled footprint

Figure 1. US retail store openings versus closures, 2022–2026. Source: Coresight Research annual store tracker; 2026 figures are Coresight projections published Feb 2026.

Retail closures hit a record 8,234 in 2025 — the highest single-year total Coresight has tracked since it began monitoring the sector. Importantly, the 2025 figure fell short of Coresight's earlier 15,000-closure forecast, which suggests the closure wave is large but is not infinite. Projections for 2026 show closures moderating to approximately 7,900 while openings hold steady around 5,500 — producing a net footprint contraction of roughly 2,400 stores.

Figure 2. Net change in US retail store count, 2022–2026. 2022 was the only net-positive year of the past half-decade.

Despite the headline-grabbing closure totals, the field services impact is additive across both sides of the ledger: 5,500 openings in 2026 represent greenfield fit-out work, while 7,900 closures represent fixture recovery, pharmacy dismantling, signage removal, and lease-exit work. Closures do not eliminate field services demand; they redirect it from installation to decommission.

US retail real estate: square footage opened vs closed, 2022-2026

Figure 3. US retail real estate square footage opened versus closed, 2022–2026. Closed square footage has exceeded opened square footage every year since 2023.

Square-footage data from Coresight Research tells the same story more sharply: 127 million square feet of retail space closed in 2025 alone, versus 82 million opened. Drug stores and legacy department stores accounted for a disproportionate share of the closed square footage — categories with large per-site fixture inventories, above-average decommission labor requirements, and frequently specialised handling needs (pharmacy fixtures, display cases, backroom equipment).

2.2 Retail bankruptcy has peaked — but the work hasn't

US retail bankruptcy filings per year, 2022-2026

Figure 4. US retail bankruptcy filings, 2022–2026 YTD. 2024 marked a post-pandemic high at 51 filings. 2026 YTD (through March) is running at a slower annualised pace.

Retail bankruptcies peaked in 2024 at 51 filings, then declined in 2025 to approximately 30 and are running at a slower pace in early 2026. This suggests the worst of the bankruptcy-driven closure wave has passed — but the physical work from those bankruptcies (Saks Global, At Home, Rite Aid, Party City, Jo-Ann, Big Lots, Forever 21) is still being executed. Site closures, fixture liquidations, and real estate transitions from these bankruptcies will continue to generate decommission work throughout 2026.

2.3 Banking: closures slowing, M&A surging

US bank branches: gross activity and net change, 2021-2026

Figure 5. US bank branches: gross openings versus closures (left), and net change per year (right), 2021–2026. Source: American Bankers Association analysis of FDIC deposit data; NCRC branch closure report Dec 2025; OCC filings reviewed by US News Dec 2025; 2026 estimated from JPMorgan, PNC and Bank of America announced plans.

The banking story is almost the inverse of retail. After peaking at 4,200 branch closures in 2021, the pace of closure has slowed every year since: 3,600 in 2022, 2,500 in 2023, 2,200 in 2024, and only 1,539 in 2025 (net -339 after 1,200 openings). Based on announced plans from JPMorgan Chase (160 new), PNC (200 new + 1,400 remodels) and Bank of America (~40 new in 2026), the US bank branch network will likely post its first net-positive year since 2016.

US bank M&A: deal count + aggregate value, 2022-2026 YTD

Figure 6. US bank M&A — deals announced (bars) and aggregate deal value (line), 2022–2026 YTD. 2025 saw 181 bank M&A deals, the highest annual count since 2021.

If branch closures have slowed, bank M&A has accelerated. The 181 US bank M&A transactions announced in 2025 (per Banking Dive Jan 2026) represented the highest count since 2021, and three major deals were either closed or announced in a 60-day window in early 2026: Fifth Third + Comerica (\$12.3B, closed Feb 2), Huntington + Cadence (\$7.4B, closed Feb 2), and Santander + Webster (\$12.3B, announced Feb 3). Combined, these deals affect over 1,600 US branches and will drive full-system branding, ATM migration, and décor refresh work throughout the second half of 2026.

2.4 QSR: market growth + remodel supercycle

US QSR industry: market size and growth, 2022–2026

Figure 7. US QSR industry — market size (left) and year-over-year growth (right), 2022–2026. Source: Restroworks 2025 US QSR industry data; QSR Magazine 2025 QSR 50 annual report.

The US QSR market has grown every year since 2022, from \$360 billion to a projected \$476 billion in 2026 — a compound growth rate of roughly 6–7% that has held remarkably steady even through the inflation shock of 2022–2023. Unlike general retail, QSR is not in structural decline; it is expanding. And the physical footprint that supports that market is aging, which is why the remodel investment curve has accelerated dramatically since 2023.

Major US QSR brand remodel investment, 2022–2026

Figure 8. Disclosed remodel investment by major US QSR brands, 2022–2026. Figures aggregate publicly announced multi-year programmes from Restaurant Brands International (Burger King), Subway, McDonald's, Sonic/Inspire Brands, and KFC/Yum!.

This is the single most important chart in this section for a field services provider. Disclosed remodel investment has risen from \$0.3 billion in 2022 to a projected \$4.2 billion in 2026 — a 14× increase. Burger King's Reclaim the Flame + Royal Reset programmes alone commit \$700M+ across 3,000 US sites through 2028, with active execution in 2026.

Key insight: QSR is not a closure story — it is a remodel programme story.

Section 3 — NRF Top 100 retailers

\$348M Est. 2026 labor	100 Companies tracked	~34% Confirmed activity	40% Closure-driven
----------------------------------	---------------------------------	-----------------------------------	------------------------------

The NRF Top 100 list captures the largest US retailers by revenue. It is also the most polarised of the three lists: the top of the list is aggressively expanding (Dollar General, Aldi, Tractor Supply) while the middle is aggressively closing (Walgreens, CVS, Macy's, Kohl's). This creates two parallel field services pipelines from the same dataset.

Figure 9. Top 10 NRF retailer leads by estimated 2026 field services labor. Activity type colour-coded. Source: company press releases, SEC filings, Coresight Research weekly tracker 2026.

Top opportunities — detail

JD Sports / Hibbett — \$24.0M (M&A)

Following JD Sports' 2024 acquisition of Hibbett, the combined business saw US sales growth of 51% and continues to rebrand Hibbett, City Gear, and Sports Addition locations. Approximately 1,200 stores across 36 states remain in active integration throughout 2026. Field services scope: signage replacement, POS migration, store décor refresh — fast, repeatable work at scale.

Walgreens — \$21.6M (Closure)

Walgreens' 1,200-store closure programme continues in 2026 with 500–700 additional US locations coming offline. Each closure requires pharmacy dismantling — a specialised trade with compliance requirements for controlled substances handling — alongside fixture recovery and signage removal. The work has calendar-driven urgency because lease exit deadlines drive closure completion dates.

Aldi — \$14.4M (New Store)

Aldi's 180 new US stores in 2026 represent full greenfield grocery fit-outs across 31 states, including the company's first-ever Manhattan location. Cold-chain infrastructure, refrigeration equipment installation, self-checkout deployment, and specialty department build-out all fall within field services scope.

CVS Health — \$14.0M (Closure)

CVS continues multi-year location rationalisation alongside Health Hub format conversions. Unlike Walgreens, CVS's closure cadence is slower and less publicly disclosed, but confirmed closures in 2026 will contribute meaningful decommission volume — particularly for sites with integrated MinuteClinic operations that require specialised medical equipment handling.

3.1 Activity mix analysis

The 100 leads in this list distribute across seven activity types. The mix is informative for how to prioritise outreach:

Activity type	Share of list	Est. labor	Priority
New Store / New Branch	18%	~\$62M	P1 — confirmed capex
Expansion	14%	~\$52M	P1 — active programme
M&A Integration	8%	~\$49M	P1 — tight timeline
Mixed (opens + closures)	12%	~\$42M	P2 — qualify per site
Remodel	14%	~\$49M	P2 — recurring revenue
Closure / Decommission	22%	~\$77M	P3 — recovery scope
Bankruptcy	12%	~\$42M	Urgent — fast window

Note: shares sum to 100%. Labor estimates are derived from the 100 verified leads and are rounded to illustrate concentration. Full per-company detail is available in the accompanying lead sheet.

3.2 Structural read

For field services positioning against the NRF Top 100, three observations drive strategy:

First, **closures and bankruptcies combined represent 34% of the list and \$119M in estimated labor** — a meaningful decommission-scope opportunity that is often overlooked when teams focus only on expansion leads.

Second, **new store + expansion + M&A together represent 40% of the list and \$163M** — the core growth opportunity, with confirmed budgets and active vendor selection cycles in 2026.

Third, **mixed and remodel activity together represent 26% and \$91M** — a substantial middle tier of retailers doing both, where field services providers can often win both the build-out and the recovery scopes from the same account.

Section 4 — QSR Top 50 restaurants

\$466M Est. 2026 labor	50 Brands tracked	44% % in P1 activity	60% Remodel + new
----------------------------------	-----------------------------	--------------------------------	-----------------------------

The QSR Top 50 is, by some distance, the highest-value list of the three. At \$466M of estimated 2026 field services labor across only 50 companies, it offers the strongest concentration of programme-based, multi-year, recurring work in the dataset.

Figure 10. Top 10 QSR brand leads by estimated 2026 field services labor. Source: QSR Magazine 2025 QSR 50 report; Restaurant Brands International SEC 8-K filings; Circana 2025 Restaurant Rankings.

Top opportunities — detail

Burger King — \$126.0M (Remodel)

The anchor opportunity of the entire dataset. Restaurant Brands International's disclosed investment across the original \$400M Reclaim the Flame programme and the \$300M Royal Reset extension totals \$700M+ covering 3,000 US restaurants through 2028. The field services scope includes kitchen equipment modernisation, dining-area refresh, digital menu board deployment, and building exterior updates.

Execution is franchise-by-franchise but the brand standard is centrally specified, which favours vendors with multi-site programme management capability.

Subway — \$91.0M (Remodel)

The Subway Series brand refresh programme touches nearly all 19,500 US Subway restaurants. Design updates span counter configuration, digital ordering stations, signage, seating and flooring. Subway's franchisee base is highly fragmented, making this a long-tail opportunity — ideal for field services providers who can systematise repeatable small-site execution.

Sonic Drive-In — \$21.0M (Remodel)

Inspire Brands (Sonic's parent) is rolling out a remodel programme across 500 US drive-in locations. Unique field services scope includes drive-in canopy refresh, menu board and speaker system upgrades, and kitchen equipment modernisation. Drive-in format is specialised and requires familiarity with canopy-heavy construction.

Chipotle — \$18.9M (New Store) + Wingstop — \$16.7M (New Store)

Chipotle's 315 new restaurants in 2026, most including Chipotlane drive-through pickup, represent premium fit-out opportunities. Wingstop's growth trajectory (278 net new in 2024 pace continuing, 20% same-store-sales growth) makes it a first-mover vendor opportunity — Wingstop is under-represented in most existing field services portfolios relative to its growth.

4.1 Why QSR is the most attractive segment

Recurring revenue. Remodel programmes are multi-year (Burger King through 2028, Subway ongoing) — not one-time projects.

Concentration. \$466M across only 50 companies means median deal size is larger than in retail or banking.

Tech-driven scope. POS upgrades, kiosk installs, digital menu boards, and drive-thru technology are expanding the scope of a typical QSR remodel beyond pure construction.

Franchise model. Once approved on a brand's vendor panel, a field services provider can capture work across thousands of independent franchisees without re-selling each one.

Predictable timelines. QSR remodels follow franchisee store-anniversary renewal cycles, which are known years in advance.

4.2 Activity mix — QSR

Activity type	Share of list	Est. labor	Priority
New Store	34%	~\$158M	P1 — rapid build schedule
Expansion	22%	~\$103M	P1 — active capex
Mixed	8%	~\$37M	P2 — qualify per site
Remodel	30%	~\$140M	P1 — programme contracts
Closure	6%	~\$28M	P3 — limited volume

94% of QSR activity is growth or programme-driven — the most favourable mix in the dataset.

Section 5 — Top 50 US banks

\$243M Est. 2026 labor	50 Banks tracked	26% M&A-driven	1,600+ Branches in transition
----------------------------------	----------------------------	--------------------------	---

The Top 50 US Banks list is the smallest of the three by total labor TAM (\$243M), but it is also the most event-driven. Three of the top five labor opportunities in this list were created by M&A transactions closed or announced in a 60-day window in February 2026 — meaning the work is concentrated, time-bound, and has a predictable execution schedule.

Figure 11. Top 10 US bank leads by estimated 2026 field services labor. Source: S&P Global Market Intelligence Q4 2025 bank rankings; Banking Dive M&A analysis Jan–Feb 2026; American Banker; individual bank investor relations releases.

Three major M&A events in 60 days

Date	Transaction	Value	Branches affected	Key dates
Feb 2, 2026	Fifth Third / Comerica	\$12.3B	76 MI closures + 150 new TX builds by 2029	System conversion: Labor Day 2026
Feb 2, 2026	Huntington / Cadence	\$7.4B	390 Cadence branches rebranding	Systems conversion: mid-2026

Date	Transaction	Value	Branches affected	Key dates
Feb 3, 2026	Santander / Webster	\$12.3B	~450 combined Northeast branches	Closing H2 2026 pending approval

These three transactions alone will drive an estimated \$40.5M in rebranding, signage replacement, and systems installation work through 2026. Each has publicly disclosed timelines — giving field services providers a rare ability to schedule resources against known deadlines.

Top opportunities — detail

PNC Financial Services — \$83.0M (Mixed)

PNC's \$1.5B Mobilize / retail branch programme is the single largest publicly disclosed bank field services programme in the US. Plans include 200 new branches and 1,400 branch renovations through 2028. The company doubled its new-branch target in early 2025. Scope includes full teller-line fit-outs, vault work, security and IT infrastructure, and digital transformation elements (ITMs, advisor pods).

JPMorgan Chase — \$43.0M (Mixed)

JPMorgan will add 160 new branches and complete 600 branch remodels in 2026 alone, as part of a 500-branch / 1,700-remodel plan running through 2027. Major growth markets include North Carolina, South Carolina, Florida, Pennsylvania, Kansas, Massachusetts and Tennessee. Chase is the largest US bank by assets and by branch count; its field services programme is the largest in US banking by volume.

Fifth Third + Comerica — \$23.7M (M&A)

Post-close integration includes 55 Comerica + 21 Fifth Third branch closures in Michigan (H2 2026), 150 new Texas builds through 2029 (\$600M investment), and full Comerica fleet rebranding. System conversion is scheduled for Labor Day 2026. The Texas new-build programme alone represents multi-year opportunity through 2029.

5.1 Activity mix — Banks

Activity type	Share of list	Est. labor	Priority
New Branch	16%	~\$39M	P1 — full fit-out
Expansion	18%	~\$44M	P1 — active capex
M&A Integration	26%	~\$63M	P1 — time-bound
Mixed	8%	~\$19M	P2 — qualify per market
Remodel	6%	~\$15M	P2 — brand refresh
Closure	18%	~\$44M	P3 — recovery scope
Digital Only (no retail)	8%	—	Not a field services lead

Note: 8% of the Top 50 Banks list (Goldman Sachs, BNY Mellon, State Street, Ally) have no or minimal US retail branch networks and are therefore excluded from the field services labor total. These are classified in the lead sheet as 'Digital Only' to preserve list completeness while flagging them as non-targets for branch work.

Section 6 — Net impact on field services labor

This section addresses the question management most frequently asks about these market dynamics: is this environment a net positive or net negative for our field services business?

The data-driven answer is unambiguous: **every activity driver in this dataset adds field services work.** There is no scenario in which the physical change described in this report reduces total labor demand for a provider positioned to serve both new-build and decommission scope.

2026 net field services labor impact by activity driver — all additive

Figure 12. 2026 net field services labor impact by activity driver. All six activity categories generate positive labor demand; there are no subtractive categories in the dataset.

Why every driver is additive — detail

Bank M&A integration — +\$115M. Acquisitions don't eliminate branches (most recent deals plan zero closures); they create work. Signage replacement, ATM rebranding, décor refresh, teller-line migration — all labor-intensive and typically on hard deadlines tied to legal close dates.

QSR remodels — +\$310M. By construction, remodels are pure field services work. Kitchen equipment modernisation, dining area refresh, digital menu installation, drive-thru technology deployment — none of which can be done remotely.

New store / branch builds — +\$170M. Greenfield builds are full-scope field services: trades labor, project management, and site logistics combined. Dollar General's 450 new stores and PNC's 200 new branches alone drive over \$100M of this category.

Retail closures — +\$75M. Decommission work is field services work. Walgreens, CVS, and Macy's closures together represent over \$40M in pharmacy dismantling, fixture recovery, signage removal, and site clean-out.

Retail bankruptcies — +\$27M. Bankruptcies produce the largest per-site decommission scopes because entire fleets (Party City's 700 stores, Jo-Ann's 860, Big Lots' 1,300) require coordinated handover to secondary markets or landlords.

Bank branch closures — +\$8M. Smaller volume than retail closures but higher per-site complexity (vault removal, security IT decommission, regulated signage removal).

6.1 Multi-year TAM trajectory

Estimated US field services labor — retail + QSR + banks, 2022–2027

Figure 13. Estimated US field services labor across retail + QSR + banks, 2022–2027. The 2026 figure of \$1.06B reflects our verified lead dataset; prior years are modelled using Coresight closure/opening data and QSR/banking capex disclosures; 2027 is projected based on announced multi-year programmes.

The total addressable labor pool across the three industries has grown roughly 65% from its 2022 baseline, with substantial further growth projected into 2027 as QSR remodel programmes and bank M&A integrations continue executing. The 2025 figure is an outlier driven by the year's exceptional retail closure volume; the 2026–2027 outlook normalises around a durable \$1.0–1.2B annual opportunity across the three lists.

6.2 Activity-mix comparison across lists

Activity type distribution across the three industry lists

NRF Top 100 — activity mix

QSR Top 50 — activity mix

Top 50 Banks — activity mix

Figure 14. Activity type distribution by industry list. Each list has a distinct activity profile, which matters for field services positioning.

The three industry lists have materially different activity profiles and should be approached with different sales strategies:

NRF Top 100 is the most balanced: meaningful share across new store, closure, remodel and M&A. Sales approach: segment the list by activity type and pursue multiple parallel pitches.

QSR Top 50 is dominated by new store (34%) and remodel (30%) activity, with closure representing only 6%. Sales approach: focus exclusively on programme-based contracts with brand HQs or their approved vendor panels.

Top 50 Banks is dominated by M&A (26%) and closure (18%). Sales approach: position for event-driven work with publicly disclosed timelines. Ignore the 8% digital-only banks (Goldman, State Street, BNY, Ally).

Section 7 — 2026 activity calendar

The 2026 activity calendar below sequences the major programme windows in this dataset. Several have hard deadlines (Ulta's Target shop-in-shop teardown must complete by August 2026; M&A system conversions are tied to legal and IT deadlines). These time-bound programmes should be prioritised in outreach.

Figure 15. 2026 US field services activity calendar. Bars indicate programme execution windows; shaded colour indicates activity type. Key deadlines: Ulta/Target ends August 2026; Fifth Third/Comerica system conversion Labor Day 2026.

7.1 Regional concentration

Figure 16. Regional concentration of 2026 activity by industry list. The Southeast + Northeast corridor accounts for approximately half of all activity across the three lists.

For resource planning, the regional mix matters: Southeast (26% retail, 30% QSR, 24% banks) and Northeast (22% retail, 18% QSR, 28% banks) together account for 48–52% of each list's activity. The Pacific and Mountain regions are materially under-represented relative to population, which reflects both the geographic concentration of the financial industry in the Northeast and the Sun Belt-driven expansion pattern across retail and QSR.

Section 8 — Scenario analysis & recommendations

The \$1.06B 2026 TAM is the opportunity size, not the revenue we will capture. A realistic capture rate depends on our share-of-wallet with each major account, our geographic coverage, and our ability to stand up programme management capacity fast enough to serve multi-site contracts.

Figure 17. 2026 scenarios against the \$1.06B TAM. Base case assumes 10% capture; upside assumes 25% capture with successful execution against top 6 priority accounts.

Strategic recommendations

1. Prioritise the top 6 accounts.

PNC (\$83M), Burger King (\$126M), Subway (\$91M), JPMorgan Chase (\$43M), JD Sports/Hibbett (\$24M) and Fifth Third+Comerica (\$23.7M) together represent \$391M — 37% of TAM — across only six accounts. These should have named senior CS / account leadership assigned within the next 30 days.

2. Build two parallel pitches — build and recovery.

\$170M of TAM is new-build work; \$75M is retail closure decommission; \$27M is bankruptcy-driven. The same account (e.g. Kroger: 14 opens + 60 closures) may need both scopes, and selling both from a single relationship lowers customer acquisition cost materially.

3. Invest in QSR franchise-network capability.

QSR is the highest-value list (\$466M) and its programme model (brand HQ specs, franchisee execution) rewards vendors with multi-site programme management scale. Establishing credibility with RBI, Inspire Brands, Yum! Brands and Focus Brands opens access to programme work across their full brand portfolios.

4. Staff against the 2026 calendar, not against historical seasonality.

The 2026 activity calendar (Figure 15) shows concentration in H2 2026 as M&A system conversions and the Ulta/Target teardown peak simultaneously. Field services capacity planning should assume a second-half crunch that is heavier than a typical retail year.

5. Maintain the lead sheet as a living document.

Coresight publishes weekly US store tracker updates; Banking Dive publishes M&A news continuously; QSR Magazine publishes the annual QSR 50 each year. The lead sheet methodology established in this paper can and should be refreshed every quarter, with prospect-specific detail added as CS teams verify scope through direct engagement.

The 2026 opportunity is real, concentrated, and time-bound. Early action wins.

Appendix — Data notes and source citations

Data notes

Field services labor estimate definition: Installation, decommission, and project management labor only. Excludes materials (shelving, fixtures, refrigeration, signage, IT hardware), equipment purchases, and product inventory. These are capital expenditures the retailer/bank procures separately and are not part of field services scope.

Confirmed vs announced: A lead is classified 'Confirmed' when backed by a press release, SEC filing, earnings call disclosure, or equivalent primary source. 'Announced' means the activity has been publicly discussed but a specific commitment has not yet been documented. 107 of 200 leads (54%) in the dataset are Confirmed.

2025 figures: Retail closures for 2025 are reported as 8,234 per Coresight Research (December 2025), which was significantly below Coresight's original January 2025 forecast of 15,000. We have used the actual 2025 figure throughout this paper. Earlier drafts of this analysis used the 15,000 forecast; all charts and totals have been updated.

2026 figures: All 2026 figures are based on announced plans, Coresight projections, or our modelling of publicly disclosed multi-year programmes. They are forward-looking and subject to change. 2026 YTD figures in some charts reflect activity through Q1 2026.

Primary data sources

Source	Coverage
Coresight Research	Annual US Store Tracker (2022–2026); US Store Tracker Extra monthly reports; midyear and full-year reviews; retail bankruptcies databank. Primary source for aggregate US retail store counts.
NRF / Kantar	Top 100 Retailers 2025 report (published Q3 2025); Hot 25 Retailers 2025 list. Primary source for NRF Top 100 list composition.
QSR Magazine	2025 QSR 50 Annual Report (published April 2025); system-wide sales, unit count, and AUV data. Primary source for QSR Top 50 list composition.
Circana	2025 Restaurant Rankings (published Q1 2025). Cross-reference for QSR unit and sales data.
S&P Global Market Intelligence	50 Largest US Banks by Total Assets — Q4 2025 report (published March 2026); quarterly US bank rankings. Primary source for Top 50 Banks list composition.

Source	Coverage
FDIC / OCC	Bank branch openings/closures data; Summary of Deposits annual report. Primary source for US bank branch inventory and net change data.
American Bankers Association	2024 FDIC and NCUA deposit statistics findings. Primary source for 2021–2024 gross branch opening/closure counts.
Banking Dive / American Banker	US bank M&A news coverage; deal announcements and close dates. Primary source for bank M&A activity tracking.
Restaurant Brands International	SEC 8-K filings FY2024 disclosing Reclaim the Flame and Royal Reset programme details. Primary source for Burger King remodel investment figures.
SEC filings	Company earnings releases, 8-K current reports, annual 10-K reports for all public companies in the dataset.
Company press releases	Direct announcements from Dollar General, Aldi, JPMorgan Chase, PNC, Bank of America, Walgreens, Macy's, Ulta, and all other accounts for which activity is cited.
RS Means / CBRE / CoreLogic / JLL / Dodge Data & Analytics	Construction cost data and field services benchmarks. Primary source for per-unit labor benchmarks in Section 1.

Disclaimers and limitations

Estimates are directional, not precise. All labor estimates in this paper are modelled from per-unit benchmarks applied to publicly announced unit counts. Actual labor requirements for any given programme will vary based on scope, region, union vs non-union trades, site access, and project-specific conditions. The figures should be used for relative prioritisation across accounts, not as bid estimates.

Dataset is not exhaustive. The 200 leads in this paper represent the three industry lists cited. Additional field services opportunities exist in healthcare, hospitality, logistics/warehouse, and public sector — which are not covered here.

Forward-looking figures may change. 2026 and later projections are based on announced programmes. Any programme can be delayed, modified, or cancelled by the operating company. Major bank M&A deals in particular require regulatory approval that is not guaranteed.

Bankruptcy-driven closures may execute faster than announced. Retail bankruptcy schedules compress under court supervision. Decommission windows that are stated as multi-month may collapse to weeks depending on landlord and trustee decisions.
